

Tecnoeka's latest product innovation: active carbon filter mod. EKFCA

Since 1978, Tecnoeka produces 100% Made in Italy professional ovens for hospitality professionals. Tecnoeka is proud to present the latest product innovation, a filter with special granules based on active charcoal, mod. EKFCA developed by the R&D department located in the company headquarter in Borgoricco, Padova. This accessory uses the well known depurative properties of charcoal in order to help reduce the emission of cooking smokes and smells in the working area. The large internal surface and the high porosity make the active charcoal the perfect material to filter smokes, smells and also fat particles released in the air during cooking. The active carbon filter mod. EKFCA can be added to all the condensation hoods of Tecnoeka's Evolution line and can be used in places where the connection to a flue pipe is not possible or needed. Active carbon filter mod. EKFCA is specially designed to secure a healthy living environment for both workers and customers. Tecnoeka's goal is to meet the expectations of its customers and to deliver efficient and easy – to – use products. For further information on the active carbon filter mod. EKFCA and other Tecnoeka products, please visit www.tecnoeka.com. Tecnoeka: Make it Easy.
